

ABSTRACT OF THE DISCLOSURE

An input device includes a case, circuit boards, and a support member. The case includes a rib formed therein to extend in a given direction.

- 5 The circuit boards each include an input part, and are temporarily fastened to the case via the rib in process of assembling the input device. After the circuit boards are temporarily fastened to the case, the support member is fixed to the case so as to
- 10 support the circuit boards between the support member and the case.
